Front-End Developer

Job description

About us

We are an innovative presence in the Workforce Business Intelligence community serving the labor departments of state governments for over 20 years. We have recently redesigned and rebuilt the user-facing components of our applications, integrating a modern BI platform while continuing to leverage the multidimensional modeling database components that have successfully differentiated us in the marketplace.

Over the past decade, our database components have reached a high level of sophistication and function, supporting almost unlimited dimensionality to support true self-service analytics.

We are in the process of expanding the scope and capabilities of our applications and seek an individual with the expertise, experience, vision and drive to be a key member of an innovative product development team delivering mind-blowing leading edge BI applications.

We are looking for someone with strong skills in the relevant areas, who could move into a project leadership role that requires excellent communications skills, business analyst capabilities, and a clear understanding of systems architecture and design.

Responsibilities:

- Develop user-facing features for web applications
- Collaborate with the design team to build UI/UX designs
- Lead code reviews to ensure code quality best practices of next generation prototype
- Leverage SSAS / OLAP backend to provide analytics through an innovative front end.
- Troubleshoot and debug issues reported by users or the QA team
- Optimize applications for maximum speed and scalability
- Provide leadership and guidance in integrating emerging technologies, especially AI
- Evaluate and recommend improvements to current development processes and practices.

Experience:

Note that we are most interested in candidates with extensive vanilla JavaScript knowledge, knowledge of frameworks is not an advantage. Direct experience with BI and OLAP databases is an advantage.

- Proven expertise as a Front-End Developer or similar role
- Expertise in JavaScript, HTML, CSS, PHP, GitHub
- Familiarity with Syncfusion and design patterns
- Experience with UI/UX design principles and best practices
- Experience with content management tools, especially WordPress
- Familiarity with software development methodologies and the context for their use
- Experience with back-end technologies, especially SSAS and MS SQL

If you're passionate about pushing the boundaries of web development and believe in the power of an inclusive workspace, we want to meet you. Dive into a role where every voice is heard, your expertise is valued, and your innovation is celebrated.

Apply today and help shape the future of BI web applications with us!
